F (White)	F1 - F19	The National Routeing Guide in detail

WHY HAVE THE NATIONAL ROUTEING GUIDE?

In the past, many tickets were valid for travel by "any reasonable route". What was a "reasonable route" between a particular origin station and destination station was never precisely defined and would often depend on the knowledge and experience of the members of staff consulted. Occasionally customers would meet on-train staff with ideas of what was "reasonable" different from those of the rail staff or travel agent who had originally given the route to the customers.

The new independent operators require a more precise definition of the routes that a customer may use for a particular journey. The routes that a customer may use are now known as "permitted routes". These permitted routes are precisely defined and the definitions are published in this National Routeing Guide.

The National Routeing Guide is available to all station and on-train staff and to ATOC Appointed Travel Agents.

WHEN TO USE THE NATIONAL ROUTEING GUIDE

When a customer asks for the fares and times for a journey - you first apply the principles of impartial retailing.

A customer may choose a rail journey and they wish to know the fares available or they may choose a fare for which a service must be found.

Most customers wish to make journeys on **through trains** or by the **shortest route** (e.g. by changing trains at a station situated between the origin and destination). In both these cases they will be travelling on a permitted route provided the correct fare has been paid by the customer (taking into account any routeing indicated by the fares manual). **The through train must be advertised in the public timetable as a through service and the route it takes may not be a permitted route if a change of train is made.** You will therefore only need to use the Routeing Guide if the customer is using neither an advertised through train or the shortest route (unless you are unsure what is the shortest route).

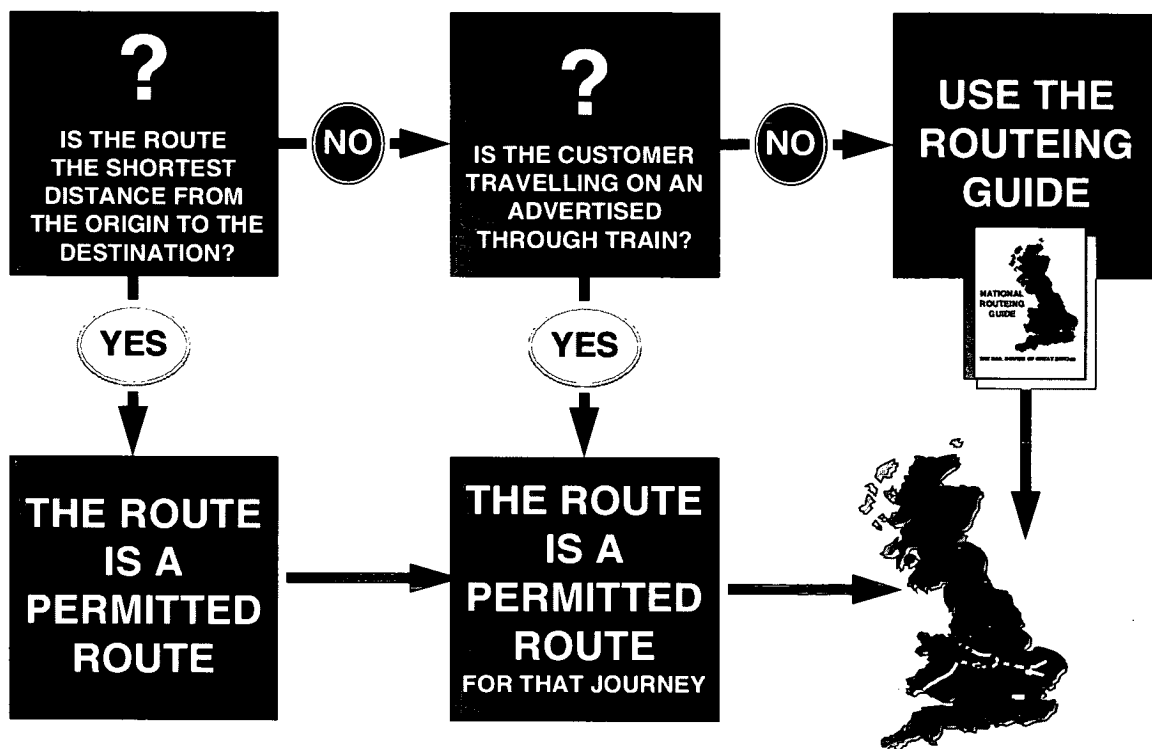

SECTION A: HOW TO USE THE NATIONAL ROUTEING GUIDE

However, there are occasions where the timetable offers journey opportunities over a longer route not covered by a through train service. These will be included in the Routeing Guide, which you may need to use for reference purposes.

The Routeing Guide may offer the customer a choice of routes for the same overall journey. When a choice of routes is offered and the fare is described as route "Any Permitted" or has no routeing, you are free to choose any of the routes listed in the Guide. However, if the fare specifies a route, you may only choose the routes listed in the Guide which pass through the stations listed in the route description

For example, a customer may say, "Can I go from London to Exeter via Bristol?". This will depend on the fare you have quoted or the ticket the customer holds (some fares are routed via Taunton and some are routed via Honiton). You should only advise the customer of the permitted routes from the Routeing Guides that pass through the station by which the fare paid is routed in the fares manual.

ENGINEERING WORK, DIVERSIONS AND SERVICE DISRUPTION

The Routeing Guide has been produced using the published rail timetable and fares manuals. It therefore takes into account all route variations allowed that have been notified. On occasions due to short notice engineering work and disruption, services may be diverted from their normal routes or customers asked to use alternative routes.

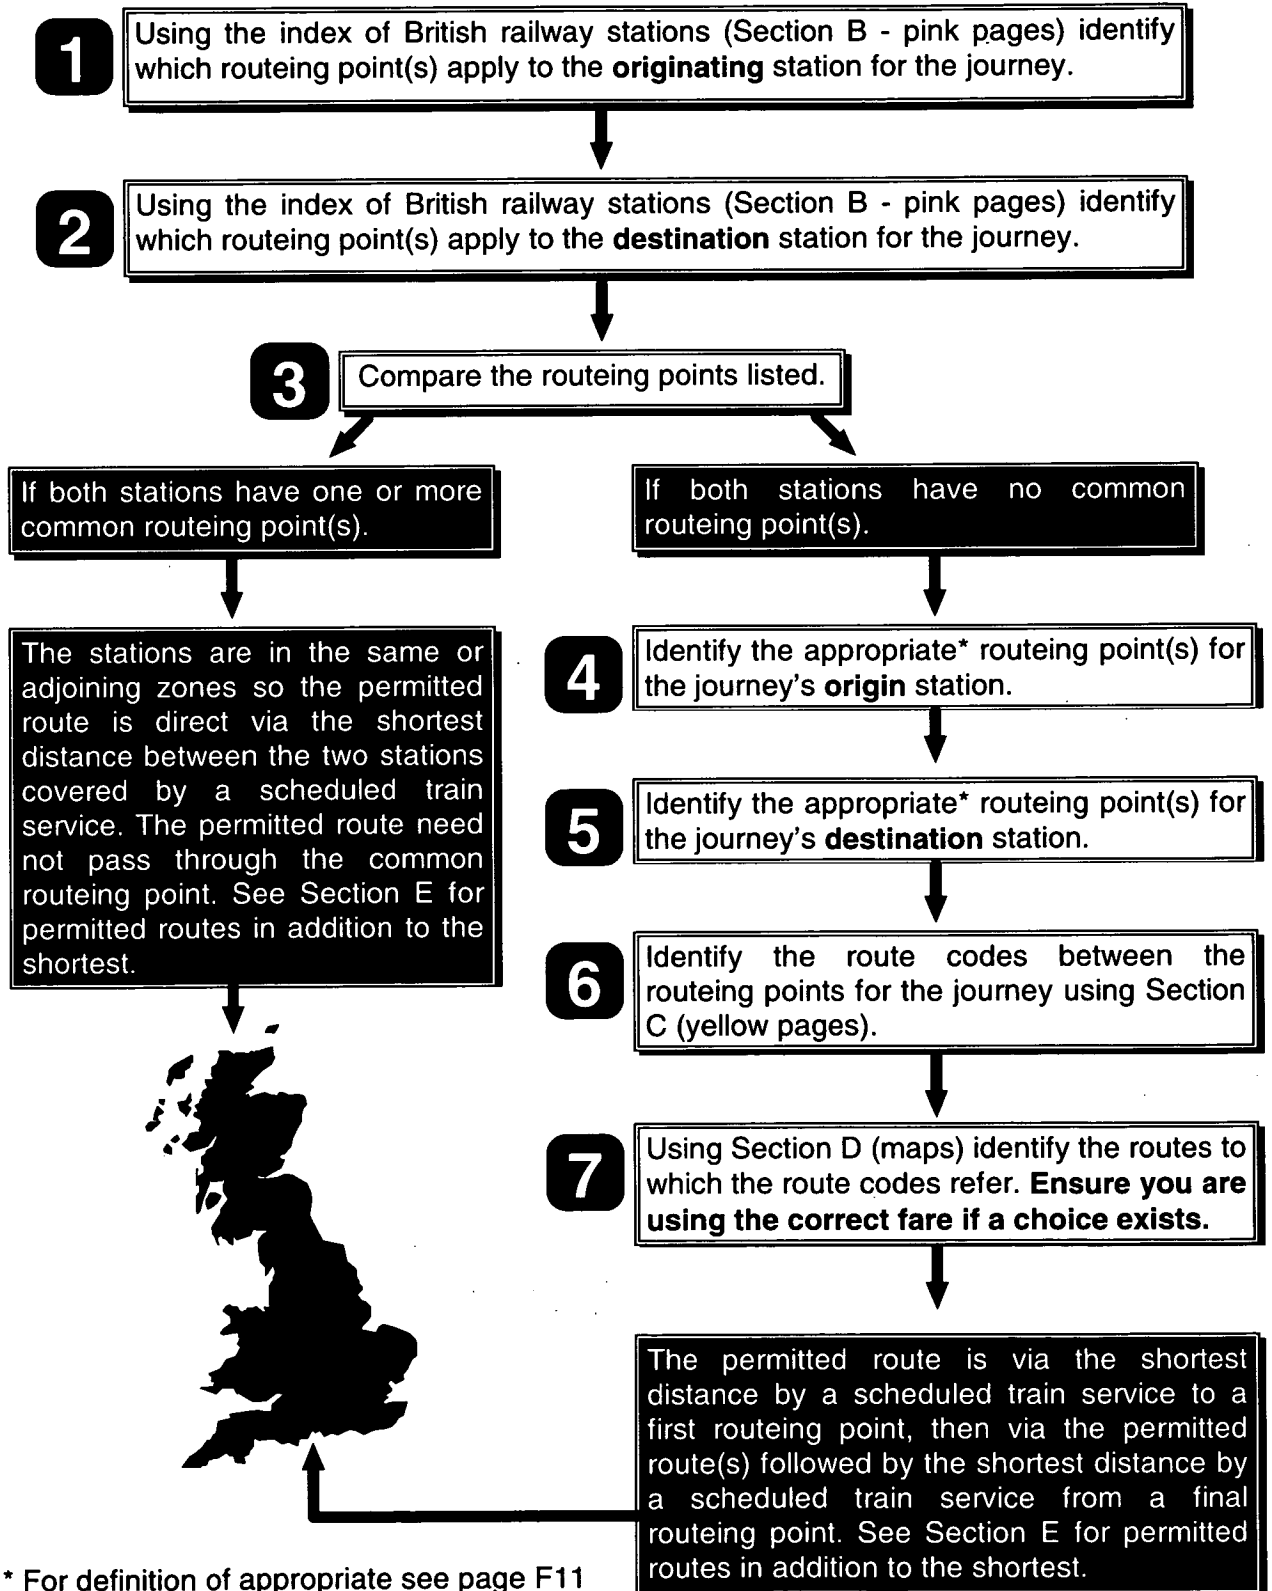

In these circumstances operators will make special provision to allow extra permitted routes. They will advise other operators and retailers of the extra provisions made to convey customers by routes other than those which are normally permitted. This provision will also apply to connecting services which are not directly affected.

Any through train diverted from its usual route will count as a permitted route between the stations it is normally scheduled to call at. This does not apply to additional stops on the diversionary route, unless specially advised or if it is still a permitted route.

**HOW TO USE THE NATIONAL ROUTEING GUIDE**

The National Routeing Guide is designed to enable users to easily and quickly identify the permitted routes between any stations in Great Britain for which a fare exists. The guide should be used, as necessary, in conjunction with a rail network map, the current Great Britain Passenger Railway Timetable and the correct Fares Manual.

To identify the permitted routes the following stages should be followed;

* For definition of appropriate see page F11

GROUPED STATIONS

A number of stations have been grouped together for customer convenience. This is to ease customer interchange by enabling customers to access better train services and improved station facilities. A customer may travel via any station in a group, including doubling back, provided that the group is on one of the permitted routes between their origin and destination stations.

The following Grouped stations are indicated in Section B:

LONDON GROUP			
Blackfriars	Farringdon	London Bridge	St Pancras
Cannon Street	Fenchurch Street	Marylebone	Victoria
Charing Cross	Kings Cross	Moorgate	Waterloo
City Thameslink	Kings Cross Thameslink	Old Street	Waterloo East
Euston	Liverpool Street	Paddington	

BIRMINGHAM GROUP	
Birmingham Moor Street	
Birmingham New Street	
Birmingham Snow Hill	

GLASGOW GROUP	
Ashfield	Glasgow Central
Glasgow Queen Street	

READING GROUP	
Reading	Reading West

BRADFORD GROUP	
Bradford Interchange	
Bradford Forster Square	

HASTINGS GROUP	
Hastings	
St Leonards Warrior Square	

SHEFFIELD GROUP	
Meadowhall	Sheffield

BRIGHTON GROUP	
Brighton	Hove

LEEDS GROUP	
Cross Gates	East Garforth
Garforth	Leeds
Micklefield	

SOUTHAMPTON GROUP	
Redbridge	Millbrook
Swaythling	St Denys
Southampton Central	
Southampton Parkway	

BRISTOL GROUP	
Bristol Parkway	
Bristol Temple Meads	
Filton Abbey Wood	Lawrence Hill
Stapleton Road	

LEWISHAM GROUP	
Lewisham	St Johns

SOUTHEND GROUP	
Southend Central	Southend East
Southend Victoria	

BROMLEY SOUTH GROUP	
Bickley	Petts Wood
Bromley South	Shortlands

LIVERPOOL GROUP	
Birkenhead Hamilton Square.	
Edge Hill	Liverpool Central
Liverpool James Street	
Liverpool Lime Street	
Liverpool Lime St. Low Level	
Moorfields	Sandhills

STEVENAGE GROUP	
Stevenage	Hitchin

CHATHAM GROUP	
Chatham	Gillingham (Kent)
Rochester	Strood

MAIDSTONE GROUP	
Maidstone Barracks	
Maidstone East	Maidstone West

STREATHAM GROUP	
Streatham	Streatham Common
Streatham Hill	

CROYDON GROUP	
East Croydon	South Croydon
West Croydon	

MANCHESTER GROUP	
Deansgate	Manchester Piccadilly.
Manchester Victoria	Oxford Road
Salford Central	Salford Crescent

WAKEFIELD GROUP	
Wakefield Kirkgate	
Wakefield Westgate	

DERBY GROUP	
Belper	Long Eaton
Duffield	Peartree
Derby	Spondon

PLYMOUTH GROUP	
Devonport	Keyham
Dockyard	Plymouth

WARRINGTON GROUP	
Warrington Bank Quay	
Warrington Central	

DORKING GROUP	
Dorking	Dorking (Deeptide)

PONTEFRAC T GROUP	
Pontefract Baghill	
Pontefract Monkhill	
Pontefract Tanshelf	

WEST HAMPSTEAD GROUP	
West Hampstead	
West Hampstead Thameslink	

EDINBURGH GROUP	
Dalmeny	South Gyle
Edinburgh Haymarket	
Edinburgh (Waverley)	

PORTSMOUTH GROUP	
Bedhampton	Cosham
Fareham	Fratton
Havant	Hilsea
Portchester	
Portsmouth & Southsea	
Portsmouth Harbour	

WEYMOUTH GROUP	
Upwey	Weymouth

EXETER GROUP	
Exeter Central	Exeter St Davids
Exeter St Thomas	
St James Park (Exeter)	

WIGAN GROUP	
Wigan North Western	
Wigan Wallgate	

WORCESTER GROUP	
Worcester Foregate Street	
Worcester Shrub Hill	

YEovil GROUP	
Yeovil Pen Mill	Yeovil Junction

PASSENGERS FOR AVIEMORE AND CARRBRIDGE ARE PERMITTED TO ALIGHT FROM THE SLEEPER AT INVERNESS AND DOUBLE BACK TO THEIR DESTINATION IN THE MORNING

SLEEPER SERVICES OPERATED BY SCOTRAIL & GREAT WESTERN

LOCAL JOURNEY ROUTEING EASEMENTS

For local journeys where the originating station and the destination station have a common routeing point the rule states:

The route is direct via the **shortest** distance between the two stations covered by a regular scheduled train service regardless of whether or not it passes through that routeing point.

For all other journeys the rule states:

The route is via the **shortest** distance covered by a scheduled train service to the first routeing point, then via the permitted route followed by the **shortest** distance covered by a scheduled train service from the final routeing point.

This represents the minimum that an operator is required to provide and in certain circumstances an operator may wish to provide, **in addition**, an alternative via a slightly longer local route for these short journeys which have a common routeing point and for journeys to or from a routeing point.

These additions to the shortest route are listed by train operating company. Train operator's staff should refer any enquiries to the pricing manager, travel agents should contact the train operator's sales office.

DISABLED TRAVELLERS

In addition Train Operating Companies may make special arrangements for disabled customers via the Disabled Persons Reporting System. Provided these arrangements are made in accordance with the procedures laid down in the Passenger Sales Instruction Manual or Rail Directory for Travel Agents, they will override the requirements of the Routeing Guide. All staff involved in revenue protection duties will be advised, on each individual occasion, of customers who are exempted under these arrangements.

TRAIN OPERATING COMPANIES

ANGLIA RAILWAYS TRAIN SERVICES LIMITED

Pricing Manager

15 - 25 Artillery Lane

Liverpool Street

Tel 00 59008

THE NATIONAL ROUTEING GUIDE IN DETAIL

WHY HAVE THE NATIONAL ROUTEING GUIDE?

In the past, many tickets were valid for travel by "any reasonable route". What was a "reasonable route" between a particular origin station and destination station was never precisely defined and would often depend on the knowledge and experience of the members of staff consulted. Occasionally customers would meet on-train staff with ideas of what was "reasonable" different from those of the rail staff or travel agent who had originally given the route to the customers.

The new independent operators require a more precise definition of the routes that a customer may use for a particular journey. The routes that a customer may use are now known as "permitted routes". These permitted routes are precisely defined and the definitions are published in this National Routeing Guide.

The National Routeing Guide is available to all station and on-train staff and to ATOC Appointed Travel Agents.

To use the National Routeing Guide effectively you need to know:

HOW the Guide is organised

WHEN to use the Guide and.....

HOW to use the Guide.

HOW THE NATIONAL ROUTEING GUIDE IS ORGANISED

The National Routeing Guide has 6 sections, **A, B, C, D, E & F** which are described below.

A

Section A - describes how to use the Guide.

This is a quick reference section giving an overview of the principal steps to using the Guide. Section A also lists the stations which have been grouped for the convenience of passengers changing trains.

B

Section B - (the pink pages) is a list of British railway stations showing their related routeing points.

To write down all the permitted routes between all possible pairs of stations would require many volumes which would be impracticable to use. However the principles that are used in compiling timetables and fares manuals have been adapted to present the permitted routes in a straightforward way.

Stations are divided into 2 categories - 121 main routeing stations (a similar idea to Fully Priced stations) and the other stations. These other stations are related to up to four routeing points. The routeing points related to each station are shown in Section B (pink pages) of this guide.

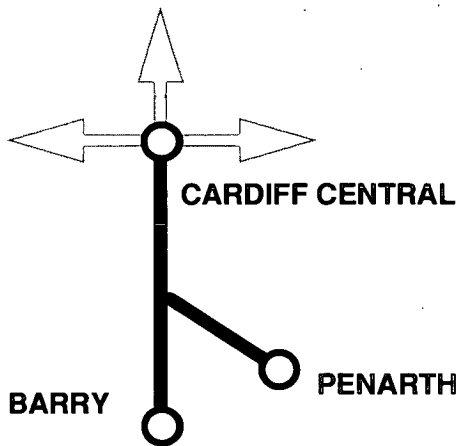

Some stations have been grouped together and given a common name, e.g. Lewisham and St John's comprise the Lewisham Group; Devonport, Dockyard, Keyham and Plymouth comprise the Plymouth Group. There are 33 station groups. They are defined on page A4. 32 of these groups are routeing points and one (the Stevenage Group) is not.

The purpose of these groups is to give customers travelling to or from stations in a group a better service and/or better station facilities. A customer may travel via any station in a group, including doubling back, provided that the group is on one of the permitted routes between their origin and destination stations.

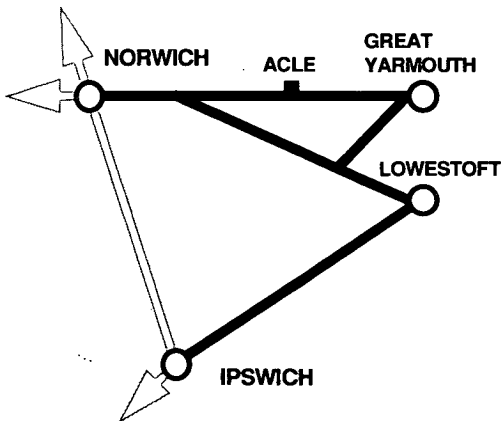

It is helpful to imagine the rail network divided into a number of imaginary zones. Every station is either wholly in a zone or, in the case of the 121 routeing stations, is a gateway between one zone and another. The actual routeing point which acts as a gateway will depend on the details of a customer's journey.

EXAMPLE ONE
Penarth - routeing point is Cardiff Central. Penarth is in a zone whose gateway to other zones is Cardiff Central. The rail map shows that journeys from Penarth are either to stations in a zone bounded by Barry Island/Penarth and Cardiff Central or to destinations outside that zone travelling via Cardiff Central.

INDEX TO BRITISH RAILWAY STATIONS					
		***** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS *****			
Penally		Shrewsbury	Swansea		
Penarth		Cardiff Central			
Pencoed		Cardiff Central			

EXAMPLE TWO
Acle - routeing points are Ipswich and Norwich. The rail map shows that journeys from Acle are either wholly within the zone consisting of the Norwich - Great Yarmouth, Norwich - Lowestoft - Ipswich and Great Yarmouth - Lowestoft lines or to stations outside that zone when travel is either via Ipswich or via Norwich.

INDEX TO BRITISH RAILWAY STATIONS					
		***** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS *****			
Acklington		Edinburgh	Newcastle		
Acle		Ipswich	Norwich		
Acocks Green		Banbury	Birmingham	Coventry	

EXAMPLE THREE

Pulborough - routeing points are Brighton Group, Ford and Horsham. The rail map shows that Pulborough is in a zone bounded by Ford, Horsham and Brighton/Hove (the Brighton Group). This means that journeys are either wholly within this zone e.g. Pulborough to Worthing or to destinations outside the zone via the appropriate routeing point e.g. Pulborough to Portsmouth via Ford, Pulborough to London via Horsham or Pulborough to Hastings via Brighton/Hove.

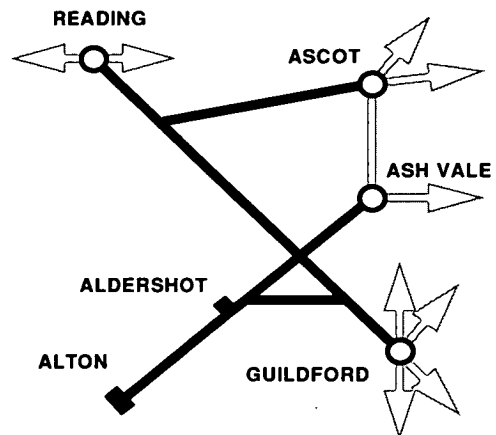

INDEX TO BRITISH RAILWAY STATIONS

***** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS *****					
Prudhoe		Carlisle	Newcastle		
Pulborough		Brighton	Ford	Horsham	
Purfleet		Barking	Romford	Southend	

EXAMPLE FOUR

Aldershot - routeing points are Ascot, Ash Vale, Guildford and Reading. The rail map shows that customers can make journeys wholly within the zone bounded by Ascot, Ash Vale, Guildford, Reading and Alton (Alton cannot be a routeing point as it leads nowhere) or to destinations outside the zone via Ascot, Ash Vale, Guildford or Reading as required by the customer's journey.

INDEX TO BRITISH RAILWAY STATIONS

***** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS *****					
Aldermaston		Basingstoke	Reading	Westbury	
Aldershot		Ascot (Berks)	Ash Vale	Guildford	Reading
Aldrington		Brighton	Ford	Horsham	

Sometimes a station has no scheduled passenger service to one of the routeing points to which it is related. These routeing points should be ignored. These currently unused routeing points will allow operators to introduce new train services in the future without radically altering the Routeing Guide.

HOW TO FIND THE APPROPRIATE ROUTEING POINT(S)

You may use any routeing point, provided it does not require the passenger to:

- Double back (passing through the same station twice on a single journey) passing through the origin or destination unless the fare paid specifically permits this (*i.e. Ealing Broadway to Swindon via London*) or it is within a grouped station area (see page A4).
- Travel by a route for which the fare for one of the component legs of the journey is greater than the fare for the overall journey. This rule is explained below.

Diagram 1

Imagine a customer wishing to travel from **A** to **D**.

Station **A** is related to routeing point **B** and station **D** is related to routeing points **C** and **E**. The fare in the fare manual is routed via "any permitted route". There is a better train service via **C** than via **E**. Is the customer allowed to travel via **C**?

Obtain the fare **A - D**.

Obtain the fare for the same ticket type **A - C**. If the fare **A - C** is greater than the fare **A - D**, the customer cannot travel via **C**. If the fare **A - C** is less than or equal to the fare **A - D** then the customer may travel via **C**.

Diagram 2

Imagine a customer wishing to travel from **A** to **D**.

Station **A** is related to routeing points **B** and **C**. The customer wishes to travel via **B** to meet a colleague. The fare in the fare manual is routed via "any permitted route". Is the customer allowed to travel via **B**?

Obtain the fare **A - D**.

Obtain the fare for the same ticket type **B - D**. If the fare **B - D** is greater than the fare **A - D**, the customer cannot travel via **B**. If the fare **B - D** is less than or equal to the fare **A - D** then the customer may travel via **B**.

Example: Using the Rail Network Map, GBPRT, Fares Manual and National Routeing Guide to find a permitted route when the origin and destination stations do not have a routeing point in common.

Customer wishes to travel from Lydney to Craven Arms. No route is shown against the fare in the Fares Manual. So we must use the National Routeing Guide to establish permitted routes.

- 1) The Rail Network Map and the GBPRT show there are services via Newport, via Birmingham and via Worcester - Hereford. Which of these routes are permitted?
- 2) National Routeing Guide Section B shows that Lydney is in a zone bounded by Newport, Bristol Group and Gloucester and that Craven Arms is in a zone bounded by Shrewsbury, Hereford and Swansea.
- 3) Combining the routeing points (in 2) with the journey possibilities (in 1) we have 3 possible routes:

Lydney - **Newport** - **Hereford** - Craven Arms

Lydney - **Gloucester** - Birmingham - Wolverhampton
Shrewsbury - Craven Arms

Lydney - **Gloucester** - **Hereford** - Craven Arms

Which of these possible routes are actually permitted?

- 4) Apply the rule that "the fare for a component leg of a journey must not be greater than the fare for the overall journey". The Fares Manual shows that the fare Lydney - Shrewsbury is greater than the fare Lydney - Craven Arms so the customer is not permitted to travel via Shrewsbury. The fare Gloucester - Craven Arms is less than the fare Lydney - Craven Arms so Lydney - Gloucester - (Worcester) - Hereford - Craven Arms is a permitted route.
- 5) The customer's preferred departure or arrival time will determine which of the 2 permitted routes is suitable for the customer's journey.

Example: Using the Rail Network Map, GBPRT, Fares Manual and National Routeing Guide to find a permitted route when the origin and destination stations have a routeing point in common.

If there is a common routeing point, then that means that the stations are in the same or adjacent zones. If in the same or adjacent zones then the permitted route is the shortest route.

e.g. South Ruislip to Stoke Mandeville.

Both are in an imaginary zone bounded by Banbury, Oxford and London Group, so the fares shown on the fares manual are only valid by the shortest route which is via Aylesbury (you may confirm this using the mileages given in the appropriate tables of the GBPRT. these show that via Aylesbury is shorter than via London).

In the example shown on pages F13 - F14, Herne Bay to Gravesend, Herne Bay and Gravesend have a routeing point in common - Chatham. This means that they are either in the same or adjacent zones with Chatham as the Gateway between zones. The permitted route is the shortest one between Herne Bay and Gravesend and in this particular case the customer actually travels via Chatham.

C

SECTION C - (the yellow pages) is a grid showing permitted routes.

All main routes between 121 main routeing stations are identified by a single or combination of 2 letter routeing codes in this guide. The code refers to the map on which the main routes are shown. These codes will ultimately be shown alongside prices in the National Fares Manual.

Section C is essentially a grid listing all 121 main routeing points horizontally and vertically and showing the routes between all possible pairs these routeing points.

121 stations	1	2	3	4	5	6
1						
2						
3						
4						
5						
6						

It is not possible to print such a large grid on one manageable sheet of paper so the grid has been split into portions which can be printed on separate pages. Section C is easy to use although you may need some initial practice.

Each page contains the grid for 6 stations (columns across the page) and 18 stations (rows down the page)

So page C1

Aberdeen - Barking (6 routeing point stations)

London Group

	2	LM+PN	WX+CS		WX+CS		
	3	LM					
	4						
Clapham Junction	1	LONDON	WX	LONDON	WX	LONDON	LONDON

This layout is repeated until all sections of the original grid of 121 stations by 121 stations has been displayed.

To help you find your way around this sectionalised grid, at the top of each page are the names of the first and last of the 6 stations going across the page. Down the outside margin are the names of the first and the last of the 17 stations going down the page.

e.g. page C30 Huddersfield - Leeds until page C140 Wimbledon - York

To find the possible permitted routes between 2 routeing points look in the "box" where the column for the origin routeing point meets the row for the destination routeing point. Each "box" has 4 lines because there may be up to 4 sets of possible permitted routes. Usually there will be only one or two.

Example from page C31 Leicester to Cambridge

Route 1. **London** route via London

Route 2. **CN** see the map labelled **CN** in Section D

In the top row where the London row intersects the Leicester column the code **MM** denotes the route from Leicester to London.

In the left hand column alongside Cambridge the code **WA** denotes the route from Cambridge to London.

For a via London journey the codes must be added together. For Leicester to Cambridge via London this would be **MM + WA**.

ROUTES BETWEEN MAIN ROUTEING POINTS

It is easier to show routes on a map than to describe them in words so the majority of permitted routes between pairs of routeing stations are given as references to maps on which possible permitted routes are shown. These maps are in Section D.

D

SECTION D. Maps of the Rail Routes of Great Britain.

The best way to show permitted routes is on a map. Section D contain these route maps. Each map has a 2 letter code which is used in Section C (as described above). These maps show (in yellow) possible permitted routes from which you finally choose the customer's actual route.

Each map is shown as a geographic map and as a diagrammatic map. The geographic map helps you relate permitted routes to the rail network map and the GBPRT. The diagrammatic map gives more detail and show where routes carry over from one map to an adjoining map.

The maps should not be used until the permitted route has been identified using Section C.

In some circumstances two points on a map may be on the same route, but the permitted route between them may not be via the map concerned. For example both Ashford International and Lincoln appear on Map CS, but the permitted route between Ashford International and Lincoln is LK+ER - not CS.

E

SECTION E (the green pages). Local journey routeing easements.

The permitted route between one station and another station in the same or adjacent zone is the shortest distance covered by a scheduled service. The permitted route between a station and its routeing point station is the shortest distance covered by a scheduled service.

However individual Train Companies may permit customers to travel by other routes. These routes are known as "local journey routeing easements" and are shown in Section E.

GUIDELINES FOR USING THE NATIONAL ROUTEING GUIDE

The National Routeing Guide is designed to enable users to easily and quickly identify the permitted route between any stations in Great Britain for which a fare exists. The guide should be used, as necessary, in conjunction with a rail network map, the current Great Britain Passenger Railway Timetable and the correct Fares Manual.

To identify a permitted route the following stages should be followed;

1 Step 1

Use Section B (pink pages) to find the routeing point(s) relating to the origin station. If the origin station is a routeing point, it must be used as the routeing point and no further selection is required.

Use the pink pages to find whether the origin and destination stations are routeing points or in-zone stations.

2 Step 2.

Use Section B (pink pages) to find the routeing point(s) relating to the destination station. If the destination station is a routeing point, it must be used as the routeing point and no further selection is required.

3 Step 3.

Compare the Routeing Points

If the origin and destination have a common routeing point or common routeing points a single routeing point can be used. The permitted route is then direct via the shortest distance from the origin to the destination over which a regular scheduled passenger train service operates. Unless Section E allows a more generous alternative route.

If there is no common routeing point the appropriate routeing point(s) must be selected for the origin station and for the destination station. No more than two routeing points should be used to identify any one route for a journey (one for the originating station and one for the destination station).

For all local journeys throughout most of the country the above three steps will identify the permitted route. However, for longer distance journeys, where the origin and destination have no common routeing point, stages 4 - 7 will need to be followed.

4 Steps 4 & 5.

Ensuring that the routeing points are appropriate.

5

The Routeing Guide offers customers a reasonable choice of routes for their journey. It also protects the revenue of train operators by not allowing customers to travel via a point which has a higher fare from their starting station than that to their destination station. This means that a customer cannot book alternative cheaper journeys and alighting short of destination.

The fares manual may restrict the choice of routes by indicating a specific route, if so, this will be listed in the guide, but it will mean that other routes listed may not be available at this fare. If the fare is specifically routed in the fares manual check carefully that the route selected is via this specific route.

It is important that account is taken of the fare for the journey, **You may only use all the listed routes if the fare is unrouted or the route is described as "any permitted" and that no routed fare priced higher than "any permitted" exists.**

If you are unsure whether a particular routeing point for the origin station is the correct one compare the fare from that routeing point to the destination with the fare for the throughout journey - **it is an appropriate routeing point only if that fare is the same or lower** than the fare for the throughout journey from the origin station to the destination station.

If you are unsure whether a particular routeing point for the destination station is the correct one compare the fare from that routeing point to the origin station with the fare for the throughout journey - **it is an appropriate routeing point only if that fare is the same or lower** than the fare for the throughout journey from the origin station to the destination station.

The fare comparison must be made using the same fare type:

If the customer requires a Single then Single fares should be compared. If the customer requires a Saver then Saver fares should be compared.

In certain highly unusual circumstances, due to local fares policies, this may not be possible. If this is the case and the origin station or destination station has a lower fare of the type selected than **all** its routeing points the Standard Single (Day or Open) fares should be used for comparison purposes.

If both stations are routeing points - go to Section C. Use the grid to find permitted routes. These routes are shown on the appropriate map.

If one is a routeing point and one is an in-zone station - the permitted route is the shortest route to the routeing point plus the permitted routes between routeing points.

If both are in-zone stations then it is the shortest distance to the first routeing point, followed by the permitted routes between the routeing points, then finally the shortest route from the final routeing point. Section E may permit some more generous routes to and from the routeing points.

6 Step 6

Identify the route code using Section C

The route code(s) may be found at the point where the routeing point rows and columns intercept. You may use Section C in either direction, either by looking up the originating routeing point from the rows on the "Y" axis and finding the point at which they intercept the destination routeing point column on the "X" axis or by looking up the originating routeing point column on the "X" axis and finding the destination routeing point row on the "Y" axis.

If the routeing code is "London" you will need to summate the route code "to London" with the code "from London". Route codes to and from London are listed on every page in Section C under the stations in the left hand column and under the stations in the top row. For a detailed description of Section C see pages F6 - F9.

7 Step 7

Identify the route to which the code(s) refers using the maps (Section D)

Each code refers to a map. If a single code is indicated the route is via any route on that map from the first routeing point to the final routeing point without doubling back (passing through the same station twice on a single journey).

If a number of codes are shown added together the route is via any route on that map from the first routeing point to intercept point(s) for the next route without doubling back, then via any route along that route without doubling back. This is repeated until the final route is reached then via any route along that route until the final routeing point is reached.

If a combination of routes is shown in brackets "(" or separated by a slash "/" then both routes may be used in combination without doubling back (passing through the same station twice on a single journey).

DO NOT USE THE MAPS UNTIL YOU HAVE FOLLOWED STAGES 1 - 6.

LOCAL JOURNEY EASEMENTS

The rule for local journeys states that **"the route is direct via the shortest distance between the originating station and the destination station covered by a regular scheduled train service"**. This rule also applies to longer distance journeys for journeys to or from a routeing point. Operators may allow in addition to the shortest route extra alternatives which may offer the customer a better service at certain times. These are listed in Section E (green pages) of the manual as advised to the guide by operators.

EXAMPLES

Three examples are included in section F to assist users;

- | | | |
|--------|------------------------|---|
| F13-14 | Herne Bay to Gravesend | A local journey where the two stations have a common routeing point. |
| F15-16 | Par to Pontypridd | A long distance journey where both stations have one routeing point each which is not common to both. |
| F17-19 | Addlestone to Alnmouth | A long distance journey where both stations have a choice of routeing points none of which is common. |

GROUPED STATIONS

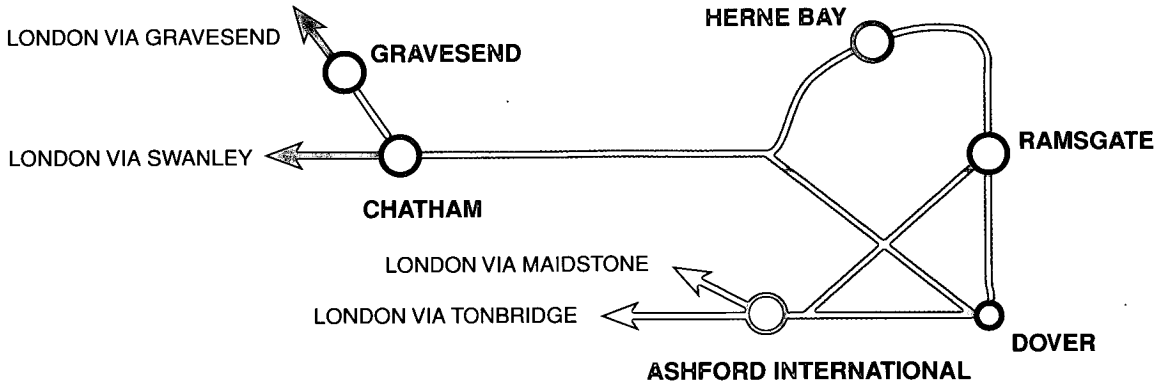

A number of stations have been grouped together for customer convenience. This is to ease customer interchange by enabling customers to access better train services and improved station facilities. A customer may travel via any station in a group, including doubling back, provided that the group is on one of the permitted routes between their origin and destination stations.

**JOURNEY
EXAMPLES**

JOURNEY EXAMPLE ONE - HERNE BAY TO GRAVESEND

1. Using Section B Identify which main routeing points apply to the originating station for the journey

INDEX TO BRITISH RAILWAY STATIONS					
		*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***			
Hereford	Routeing Point			BD: CE: CS:WR	
Herne Bay		Ashford Int	Chatham Group	Ramsgate	
Herne Hill	Routeing Point			LB: LK: NK: SC	

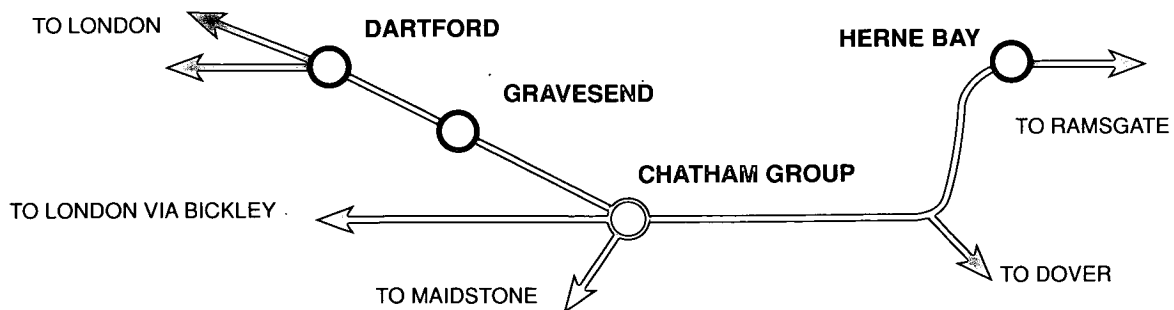

For the originating station, Herne Bay, the following routeing points are listed in alphabetical order:

- i) Ashford International
- ii) Chatham Group
- iii) Ramsgate

2. Using Section B Identify which main routeing points apply to the destination station for the journey.

INDEX TO BRITISH RAILWAY STATIONS					
		*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***			
Gravelly Hill		Birmingham Gp	Lichfield		
Gravesend		Chatham Group	Dartford		
Grays		Barking	Romford	Southend Group	

For the destination station, Gravesend, the following routeing points are listed in alphabetical order:

- i) Chatham Group.
- ii) Dartford.

JOURNEY EXAMPLE ONE - HERNE BAY TO GRAVESEND

3. Compare the routeing points listed in section B (pink pages) for the journey.

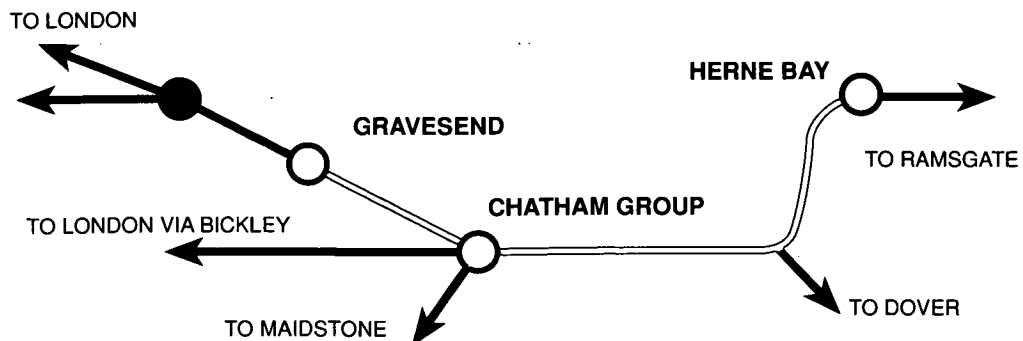

INDEX TO BRITISH RAILWAY STATIONS					
*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***					
Hereford	Routeing Point				BD: CE: CS:WR
Herne Bay		Ashford Int	Chatham Group	Ramsgate	
Herne Hill	Routeing Point				LB: LK: NK: SC

INDEX TO BRITISH RAILWAY STATIONS					
*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***					
Gravelly Hill		Birmingham Gp	Lichfield		
Gravesend		Chatham Group	Dartford		
Grays		Barking	Romford	Southend Group	

If both stations have one or more common routeing points

The route is via the shortest distance between the two stations which has a regular scheduled train service regardless of whether or not they pass through that routeing point.

Both Herne Bay and Gravesend have the Chatham Group listed as a routeing point. The Chatham Group is therefore a routeing point common to both the origin (Herne Bay) and the destination (Gravesend). The route is therefore direct via the shortest distance from Herne Bay to Gravesend over which a regular scheduled train service operates. This is (from the timetable) directly via Chatham.

This principle covers all local journeys throughout the railway system. There may be circumstances where a train operator may permit another additional slightly more generous route for a local journey. This may be because at certain times the direct service via the shortest route is infrequent and restricts journey opportunities. Details of these local journey easements can be found, listed by train operator, in section E (green pages) of this guide.

JOURNEY EXAMPLE TWO - PAR TO PONTYPRIDD

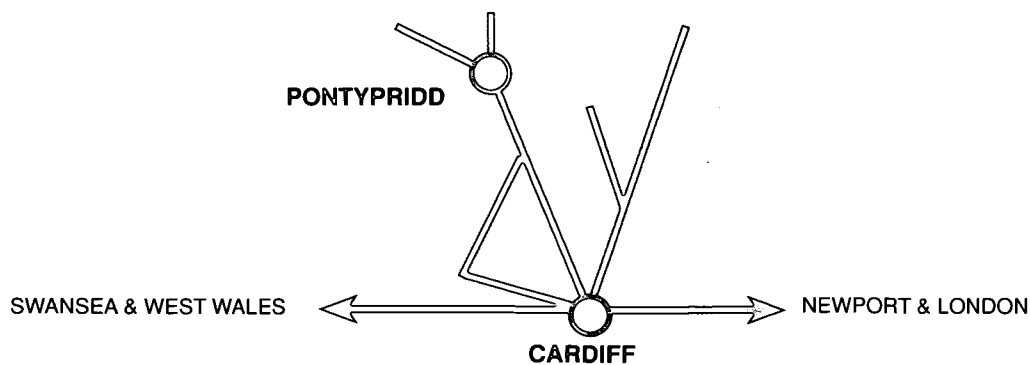

1. Using Section B identify which main routeing points apply to the originating station for the journey.

INDEX TO BRITISH RAILWAY STATIONS					
		*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***			
Pantfynnon		Shrewsbury	Swansea	Hereford	
Par		Plymouth Group			
Parbold		Liverpool Group	Preston	Wigan Group	

2. Using Section B to identify which main routeing points apply to the destination station for the journey

INDEX TO BRITISH RAILWAY STATIONS					
		*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***			
Pontypool & New Inn		Hereford	Newport		
Pontypridd		Cardiff Central			
Poole		Southampton Gp	Weymouth Gp		

3. Compare the routeing points listed in section B (pink pages) for the journey.

Par has only one routeing point, Plymouth Group, listed. This is the only routeing point applying to Par.

Pontypridd is similar in only having a single routeing point, Cardiff Central.

JOURNEY EXAMPLE TWO - PAR TO PONTYPRIDD

4. Identify the most appropriate routeing point for the originating station of the journey.

In the case of Par which has only one routeing point, Plymouth Group, no further selection is necessary. Plymouth Group is therefore the routeing point for the originating station.

5. Identify the most appropriate routeing point for the destination station of the journey.

Pontypridd also has only one routeing point, Cardiff Central, therefore no further selection is necessary. Cardiff Central is therefore the routeing point for the destination station.

6. Identify the route code applying to the journey between the two routeing points using section C (yellow pages).

ROUTES BETWEEN MAIN ROUTEING POINTS

		Cardiff Central	Carlisle	Chatham Gp	Chester	Clapham junc	Colchester
Peterborough	1	CE+CN	LM+PC	LONDON	PS	LONDON	LONDON
ER	2		MM+ER				
	3						
	4						
Plymouth group	1	CE	LM+CE	LONDON	LM+CE	LONDON	LONDON
WE	2				BD+CE	WX+WE/WR	
WR	3						
WX+WE	4				PN		
Pontefract Group	1	CE	LM+PN	LONDON		LONDON	LONDON

Using section C by following the Plymouth Group row until it bisects the Cardiff Central column the route code "CE" can be found at the intersection. This code identifies the route from the Plymouth Group to Cardiff Central. The routes are fully reversible and a similar code will be found if section C is read in reverse by following the Cardiff Central row until it bisects the Plymouth Group column. So use section C in either direction.

7. Using section D (maps) identify the route to which the code refers

The maps are in alphabetical order and each has a two letter code identification. Each map has both a geographical and a diagrammatic illustration of the route. The route is any line between the two routeing points that does not involve a double back. No double-back (travelling through the same station twice on a single journey) is permitted unless the fare allows or it is within a "grouped station" area. For the journey from the Plymouth Group routeing point to the Cardiff Central routeing point map CE permits travel to the Bristol Group via Exeter and on to Cardiff via Newport Gwent.

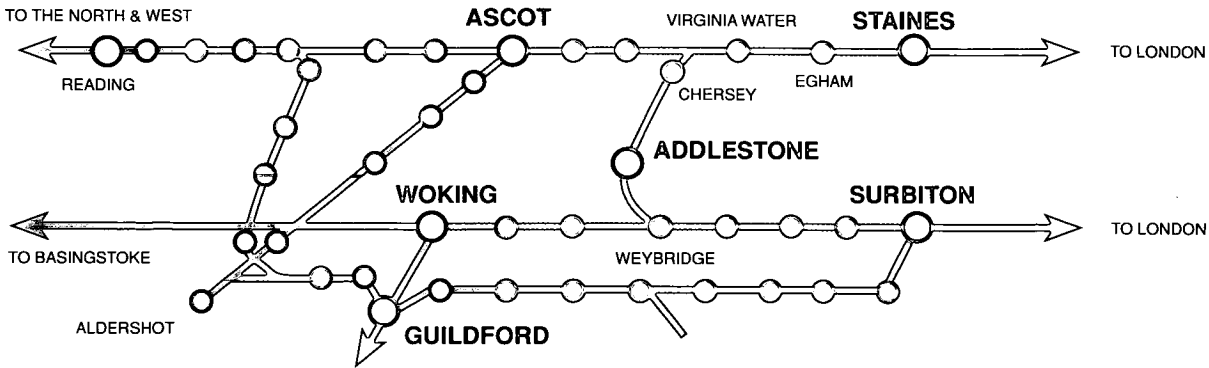

The route is via the shortest distance to the first routeing point over which a scheduled train service operates, then via the permitted route, followed by the shortest distance from the final routeing point to the destination covered by a scheduled train service.

JOURNEY EXAMPLE THREE - ADDLESTONE TO ALNMOUTH

1. Using Section B Identify which main routeing points apply to the originating station for the journey.

INDEX TO BRITISH RAILWAY STATIONS					
*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***					
Addiscombe		Beckenham Junc	Lewisham		
Addlestone		Ascot Berks	Staines	Surbiton	Woking
Adisham		Ashford Int	Chatham Group	Ramsgate	

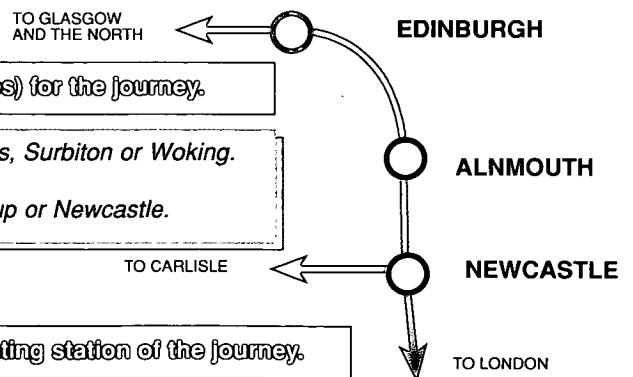

2. Using Section B Identify which main routeing points apply to the destination station for the journey.

INDEX TO BRITISH RAILWAY STATIONS					
*** SELECT ONLY ONE OF THE FOLLOWING ROUTEING POINTS ***					
Alness		Inverness			
Alnmouth		Edinburgh Group	Newcastle		
Arlesford Essex		Colchester			

3. Compare the routeing points listed in section B (pink pages) for the journey.

Addlestone has a choice of four routeing points - Ascot, Staines, Surbiton or Woking.

Alnmouth has a choice of two routeing points - Edinburgh Group or Newcastle.

4. Identify the most appropriate routeing point for the originating station of the journey.

In the case of Addlestone, with a choice of four routeing points, the most appropriate will be that which offers the best train service for the journey and fulfils the rule that it must not have a higher fare than Addlestone for the journey or involve a double back journey. The fares from Addlestone and other stations in the same area are routed via London.

The fare from Ascot to Alnmouth is higher than from Addlestone.

ASCOT

The journey from Addlestone to Alnmouth would involve a double back journey (between Weybridge & Woking) if made via the Woking routeing point.

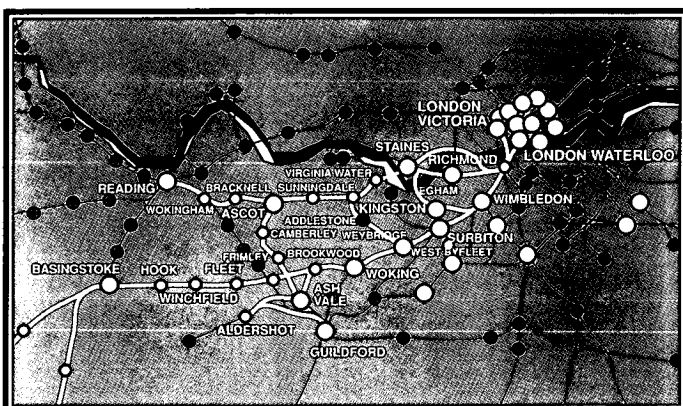

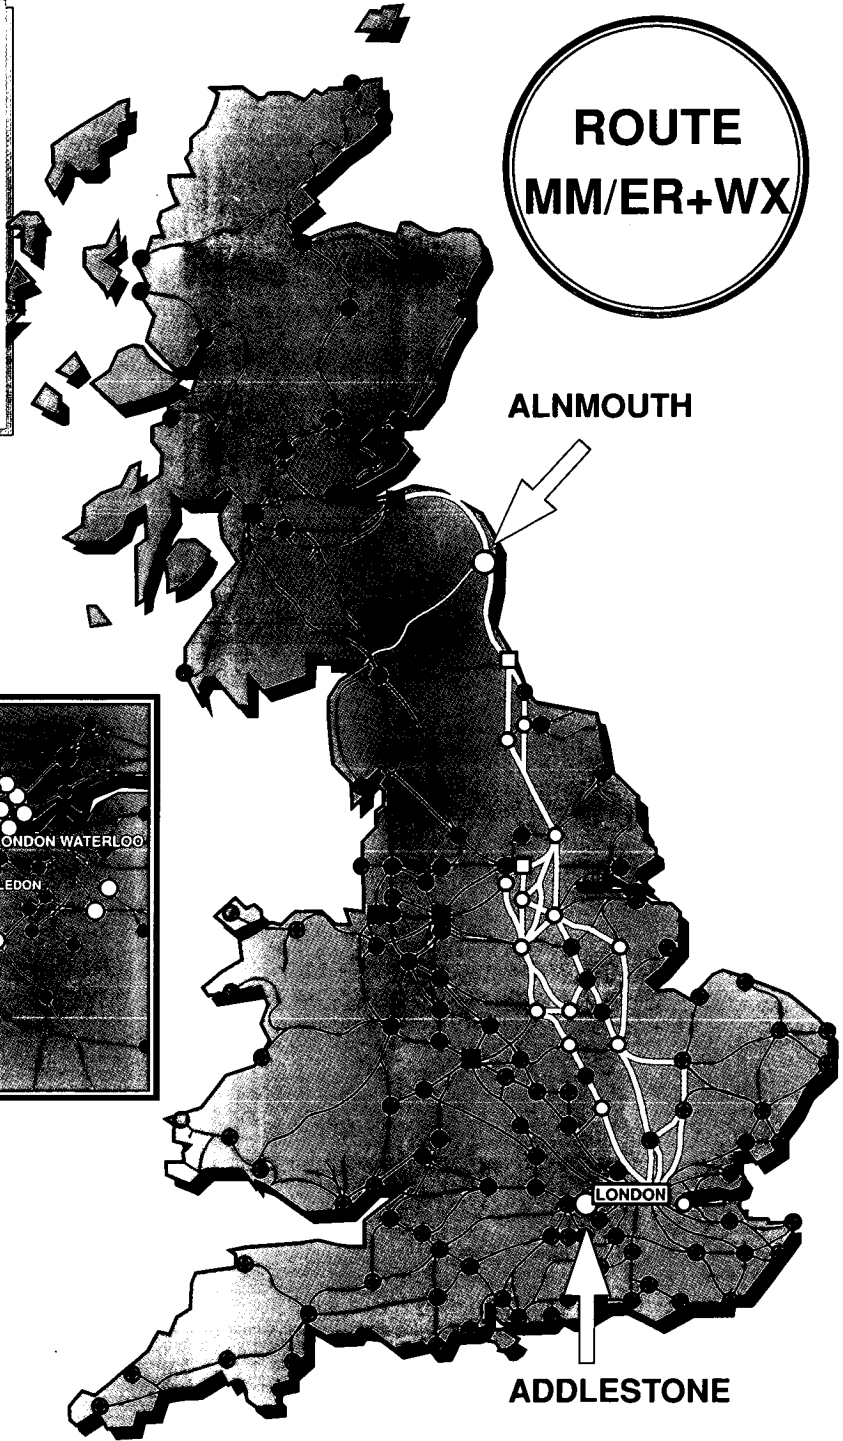

WOKING

JOURNEY EXAMPLE THREE - ADDLESTONE TO ALNMOUTH

7. Using section D (maps) identify the route to which the code refers.

The maps are in alphabetical order and each has a two letter code identification. Each map has both a geographical and a diagrammatic illustration of the route. For a journey from the Staines routing point to the Newcastle routing point Section C specifies route WX as far as London then a choice of route ER all the way from London Kings Cross to Almouth or travel from London St Pancras via route MM and joining route ER for the remainder of the journey where they intersect.

**ROUTE
MM/ER+WX**

! DO NOT USE MAPS UNTIL YOU HAVE IDENTIFIED THE PERMITTED ROUTE USING SECTION C

The route is via the shortest distance to the first routing point over which a scheduled train service operates, then via the permitted route, followed by the shortest distance from the final routing point to the destination covered by a scheduled train service.

JOURNEY EXAMPLE THREE - ADDLESTONE TO ALNMOUTH

STAINES

The fare from Staines and Surbiton to Alnmouth are both lower than from Addlestone. Either may therefore be used as the routing point for the originating station. As only one routing point must be selected the choice must be made on the basis of the best train service to the customer.

SURBITON

For the basis of this example we shall assume that Staines offers the best train service for the customer at the time they wish to travel. **Staines** should then be selected as the routing point for the originating station.

5. Identify the most appropriate routing point for the destination station of the journey.

Once again we compare the fare from Addlestone to Alnmouth with the fare from Addlestone to both the routing points for the destination station.

NEWCASTLE

EDINBURGH

The fare from Addlestone to Edinburgh is greater than the fare from Addlestone to Alnmouth, Edinburgh cannot, therefore, be used as the destination routing point.

The fare from Addlestone to Newcastle is lower than the fare from Addlestone to Alnmouth. **Newcastle**, therefore, should be used as the destination routing point.

6. Identify the route code applying to the journey between the two routing points using section C (yellow pages).

ROUTES BETWEEN MAIN ROUTEING POINTS

		Maidstone Gp	Manchester Gp	Mitcham Jct	Newcastle	Newport	Newton
LONDON GROUP	1	NK	LM	SC	ER	WR	AS
	2	LK	CS		ER+MM	CE+WE	
	3						

	4						
Staines	1	LONDON	LONDON	PD+WX	LONDON	WR+WK	LONDON
WX	2	NK+WX	CS+WX	SC+WX		CE+AW+WX	LM+MW+WX
	3	LK+WX				WX	FR+MW+WX
	4						
Stockport	1	LONDON	LM	LONDON	FR+PN	BD	LM

Using section C by following the Staines row until it bisects the Newcastle column the route code "LONDON" can be found at the intersection. This code identifies the permitted route from Staines, the originating routing point, to Newcastle, the destination station routing point. When the routing indication is London, the route to London must be summated with the route from London. The route(s) to and from London can be found alongside the Routing Point in the index columns or in the top row of each page under the Routing Point column headings. The route from Staines to London is WX and that from London to Newcastle is ER or a combination of MM and ER. The routes are fully reversible and a similar code will be found if section C is read in reverse by following the Newcastle row until it bisects the Staines column. So use section C in either direction.
